

MonkeyRush Whitepaper

Introduction

MonkeyRush is a unique cryptocurrency game created on Telegram, where users assume the role of a tribal leader of monkeys, develop their tribe, progress through various stages of evolution, and earn MonkeyRush coins. These coins can be exchanged for other cryptocurrencies, such as Notcoin and Toncoin. In the future, we plan to expand the MonkeyRush ecosystem by creating the Monkey Wallet and launching an NFT marketplace where the primary currency will be MonkeyRush coins.

Problem

Many projects in the cryptocurrency gaming market offer weak integration of in-game currency with real cryptocurrencies, which limits players' opportunities. Additionally, many projects struggle to ensure the liquidity of tokens, reducing their appeal to investors and users. Our project aims to overcome these issues by offering a new economic model, integration with the TON blockchain, and a link to real cryptocurrency.

Solution

MonkeyRush offers an integrated ecosystem where the in-game currency (MonkeyRush coins) is not only used in gameplay but can also be exchanged for popular cryptocurrencies like Notcoin and Toncoin. This is ensured through the following key elements:

1. MonkeyRush Game: Users can earn MonkeyRush coins by participating in the game, developing their tribes, and progressing through evolutionary stages.

2. Monkey Wallet: Development of a cryptocurrency wallet on the TON blockchain that will support storage and transactions with MonkeyRush coins, as well as other meme tokens on the TON network. This wallet will also become the primary tool for ensuring token liquidity, as its usage will contribute to increasing transaction volumes and market activity.

3. NFT Marketplace: A platform where users can buy, sell, and trade NFTs using MonkeyRush coins as the primary currency. This will create additional demand for our tokens, supporting their value and appeal.

Economic Model

The liquidity of MonkeyRush coins will be supported by funds from partner tasks and investments from investors. Every action within the ecosystem, whether it's participating in the game, using Monkey Wallet, or buying/selling on the NFT marketplace, will contribute to increasing the demand for MonkeyRush coins and maintaining their value.

Tokenomics

MonkeyRush coins are the in-game currency and a key element of the entire ecosystem. Below are the main aspects of the tokenomics:

- Coin Emission: The amount of MonkeyRush coins available for earning and exchange will be limited to maintain their value.
- Partner Tasks: Users can complete tasks from partners to earn MonkeyRush coins. The funds from these tasks will be used to ensure liquidity.
- Investor Investments: Attracting investments will also be a significant source of liquidity and will allow the project to develop further.

Development Plan

1. Current Stage:

- Launch and development of the MonkeyRush game on Telegram.
- Building a user base and increasing engagement.

2. Next Stage:

- Development and launch of Monkey Wallet on the TON blockchain.
- Begin integration with other meme tokens in the TON network.

3. Future:

- Launch of the NFT marketplace, where MonkeyRush coins will be the primary currency.
- Expanding the ecosystem with new features and partnerships.

Conclusion

MonkeyRush is an ambitious project that combines gaming mechanics with the opportunities of the cryptocurrency market, offering a unique experience for users and a reliable economic model for investors. We aim to create a sustainable ecosystem that benefits all participants and contributes to the overall development of the cryptocurrency market.

This document is a preliminary description of the project and may be subject to changes as the project evolves.
